SUMMARY

Project Name: Land at Crick Road
Location: Portskewett, Monmouthshire
NGR: ST 4937 8842
Type: Watching Brief
Date: 29 July 2015
Location of Archive: To be deposited with the Royal Commission on the Ancient and Historical Monuments of Wales
Site Code: PORT 15

An archaeological watching brief was undertaken by Cotswold Archaeology during the excavation of twelve boreholes on land at Crick Road, Portskewett, Monmouthshire.

No archaeological features were observed during groundworks, and no artefactual material was recovered.
1. **INTRODUCTION**

1.1 In July 2015 Cotswold Archaeology (CA) carried out an archaeological watching brief for Integral Geotechnique at land at Crick Road, Portskewett, Monmouthshire (centred on NGR: ST 4937 8842; Fig. 1). The watching brief was undertaken during a geotechnical site investigation, conducted prior to the submission of any planning proposals for the site. The objective of the watching brief was to record all archaeological remains exposed during the investigation.

1.2 The watching brief was carried out in accordance with a Written Scheme of Investigation (WSI) produced by CA (2015) and approved by Judith Doyle Archaeological Planning Manager, Glamorgan Gwent Archaeological Trust (GGAT), archaeological advisor to Monmouthshire County Council (MCC). The fieldwork also followed the *Standard and Guidance for an archaeological watching brief* (IfA 2009), the *Management of Archaeological Projects* 2 (English Heritage 1991) and the *Management of Research Projects in the Historic Environment (MORPHE): Project Manager’s Guide* (EH 2006).

2. **ARCHAEOLOGICAL BACKGROUND**

2.1 The site lies within an area of known archaeological interest. The following is a summary of archaeological evidence noted in the vicinity of site.
2.2 Prehistoric evidence has been recovered during the course of excavation at Castle Lake, located across the Nedern Brook from Caldicot Castle (c. 600m to the west of the site). Water-logged material dating to c. 2500 BC (including a fragment of plank-sewn boat) was recovered, alongside evidence of a house platform and trackway dating to the second millennium BC (Nayling & Caseldine 1997). Roman buildings have been identified near Portskewett Hill (c. 500m to the north-east) associated with iron working. Dating evidence suggests activity here ranged from the 1st to 4th centuries AD (Arnold & Davies 2000).

2.3 The site lies approximately 500m to the north-west of the historic core of Portskewett. This area predominantly dates from the late-medieval and post-medieval periods, with a number of historic structures (i.e. the 17th century Manor Farmhouse, c. 500m to the south-east of site).

3. **AIMS AND OBJECTIVES**

3.1 The objectives of the archaeological works were:

- to monitor groundworks, and to identify, investigate and record all significant buried archaeological deposits revealed on the site during the course of the development groundworks;

- at the conclusion of the project, to produce an integrated archive for the project work and a report setting out the results of the project and the archaeological conclusions that can be drawn from the recorded data.

4. **METHODOLOGY**

4.1 The fieldwork followed the methodology set out within the WSI (CA 2015). An archaeologist was present during the drilling of boreholes (Fig. 2).

4.2 Where archaeological deposits were encountered written, graphic and photographic records were compiled in accordance with CA Technical Manual 1: *Fieldwork Recording Manual*. 
4.3 The archive from the evaluation are currently held by CA at their offices in Kemble. Subject to the agreement of the legal landowner the site archive will be deposited with the Royal Commission on the Ancient and Historical Monuments of Wales.

5. RESULTS (FIGS 2)

5.1 This section provides an overview of the results of the watching brief; detailed summaries of the recorded contexts can be found in Appendix A.

5.2 The excavations consisted of 12 boreholes and excavated up to 0.5m below present ground level (bp.gl). The sandy natural substrate was seen in all boreholes at a typical depth of 0.4m bp.gl; this was overlain by a sandy clay subsoil which was typically 0.2-0.3m in thickness. This in turn was sealed by a sandy clay topsoil, typically 0.1m in thickness.

5.3 No features or deposits of archaeological interest were observed during groundworks and, despite visual scanning of spoil, no artefactual material was recovered.

8. DISCUSSION

8.1 The watching brief identified no archaeological remains within the boreholes. However, the nature of the investigation precludes a definitive statement of archaeological potential and, as such, the assessment of the boreholes is unlikely to indicate the levels of possible archaeological survival on site.

8.2 The stratigraphic sequence was identical across the observed boreholes, with only minor variations in the depth of topsoil and subsoil observed (such as in Boreholes 6 and 7, where the subsoil measured up to 0.6m thick).

9. CA PROJECT TEAM

Fieldwork was undertaken by Charlotte Haines. The report was written by Charlotte Haines. The illustrations were prepared by Dan Bashford. The archive has been
compiled by Hazel O’Neill, and prepared for deposition by Hazel O’Neill. The project was managed for CA by Ian Barnes.
